

USER GUIDE

Abstract IMS

A simple system to manage your pharmacy's **stock, purchases, sales, expiry dates, payments and expenses** — all in one place.

A plain-language guide to how the system works and what every page does.

What's inside

1. What is this system?
2. The big picture (flow diagram)
3. Words you will see (simple glossary)
4. Getting in: Login & Forgot Password
5. Finding your way around (the menu)
6. Page-by-page guide
7. Everyday workflows, step by step
8. What the colours and statuses mean
9. Printing & reports
10. Safety & good habits
11. Questions & answers

1. What is this system?

Abstract IMS (Inventory Management System) is a web application made for a medicine shop / pharmacy. It replaces paper registers and scattered spreadsheets. You open it in a web browser (it can also be installed on a phone or computer like an app) and sign in with your email and password.

In one sentence

Whatever medicine comes in, goes out, expires, or is paid for — the system remembers it and tells you the result.

What can you do with it?

- **Keep a list of all your medicines** and know how many are in stock at any time.
- **Track every batch** of every medicine with its expiry date, cost price and selling price.
- **Record purchases** from suppliers — stock goes up automatically.
- **Record sales** to customers — stock goes down automatically, and you can print a tax invoice.
- **Get warned early** about medicines that are expiring soon, already expired, or running low.
- **Send expired stock back** to the supplier, or write it off as a loss.
- **Know who owes you and whom you owe** with a full account statement (ledger) for every supplier and customer.
- **Record shop expenses** (rent, electricity, salary, etc.).
- **See how your business is doing** with a Dashboard and Analytics: sales, expenses and profit.
- **Add your staff** with their own logins.

Made for Nepal

Amounts are in Rs. (Rupees), VAT defaults to 13%, PAN/VAT numbers are supported, and the Party Ledger shows both Nepali (BS) and English dates with the fiscal year.

2. The big picture

Everything in the system revolves around one simple loop: **medicine comes in** → **sits on your shelf** → **goes out to customers**. The system records each step, keeps the money side (payments and expenses) in sync, and then turns it all into easy reports.

The most important idea: Product vs. Batch

This is the one idea worth understanding, because the rest of the system follows from it.

- A **Product (Item)** is the *kind* of medicine. Example: "Cefixime 200 mg". You create it once.
- A **Batch** is one specific delivery of that product, with its own **batch number, expiry date, buying price and selling price**. Example: "Cefixime 200 mg — Batch AB2501, expires Dec 2027, 100 strips".

Why? Because two boxes of the same medicine can expire on different dates and cost different amounts. The system keeps them separate so that nothing is mixed up and you always know exactly which stock is about to expire.

One product, many batches

The product's total stock is the sum of its usable batches.

Smart selling: earliest expiry first

When you sell, the batch list shows the batch with the **earliest expiry date first**, so older stock is sold before newer stock. Expired batches **cannot** be sold — the system blocks them.

3. Words you will see

Word	What it means
Item / Product	A medicine or product you sell (e.g. Paracetamol 500 mg).
Batch	One delivery of an item, with its own batch number and expiry date.
Party	Anyone you do business with. A Supplier is someone you buy from, a Customer is someone you sell to, and Both is a party who is both.
Purchase	A bill from a supplier. Recording it adds stock.
Sale	A bill you give to a customer. Recording it reduces stock.
Voucher / Invoice	The record of one purchase or one sale, with a number.
Walk-in / Cash customer	A customer you don't need to register — just sell and move on.
MRP	Maximum Retail Price printed on the pack.
HSN code	The product's tax classification code (optional).
Low-stock limit (Threshold)	A number you choose. When stock falls to or below it, the item is flagged as "Low Stock".
Near expiry	Stock that will expire soon.
Return to supplier	Sending stock back to the company you bought it from.
Credit note	The supplier agrees to give you money (or a deduction) for returned goods.
Write-off	Removing expired stock from the system and recording its cost as a loss.
Ledger	The account statement of one party: all bills, returns and payments, with a running balance.
Dr / Cr	Debit / Credit — the two sides of a ledger. In the ledger, Dr balance means the party owes you; Cr balance means you owe the party.
Net profit	Total sales minus everything spent (purchases + expenses).

4. Getting in: Login & Forgot Password

How you sign in

If you are not signed in and try to open any inside page, you are sent back to the Login page automatically.

Welcome page

Address: [/](#) · Anyone can see this page

- A simple welcome screen with the message "Always know what you have in stock."
- One button: **Get started**, which takes you to the Login page.

Login page

Address: </login>

- Type your **email** and **password**, then press **Sign In**.
- The little eye icon shows or hides the password as you type.
- Wrong details show the message "Invalid email or password".
- **Safety limit:** after 5 wrong attempts you must wait about 15 minutes before trying again. This protects your account from guessing.
- Once signed in, you stay signed in on that device for up to **7 days**. Press **Logout** (bottom of the menu) when using a shared computer.
- The **Forgot password?** link takes you to the reset page.

Forgot Password page

Address: </forgot-password>

Reset your password in 3 easy steps:

- The code is emailed to you and works for **10 minutes**.
- After the code is accepted, you have **15 minutes** to set the new password.
- You have to type the new password twice to make sure there is no typing mistake.

5. Finding your way around

After signing in, the **menu on the left** (Sidebar) is how you move between pages. At the top of the menu you see **your business logo and name** (you set these in Settings). On a phone the menu is hidden behind a menu button at the top of the screen.

6. Page-by-page guide

Below, every page is explained in the same way: **what it is for**, **what you see**, and **what you can do**.

6.1 Dashboard

Menu: Dashboard · [/pharma](#)

Purpose: Your shop's health at a glance. It is the first page you see after login.

What you see

- **Date filter** — choose **Monthly** (from month – to month) or **Yearly** (from year – to year). A **Reset** button brings back the default (this year so far).
- **Four summary cards**
 - **Total Sales** — money your sales brought in during the chosen period.
 - **Net Profit** — total sales minus purchases and other expenses (with the profit margin %).
 - **Purchases & Outflow** — money spent on buying stock plus other expenses.
 - **Inventory Status** — total items, how many are low on stock, and how many are expiring.
- **Revenue, Outflows & Profit Trends** — a chart that compares revenue, spending and profit over time.
- **Revenue Breakdown** — a pie chart showing where revenue comes from. Switch between **by Category** and **by Payment type**.
- **Critical Stock & Expiry Watchlist** — a short list of medicines that need attention: **Expired** **Expiring Soon** (within 15 days) and **Low Stock**. It shows 5 per page.
- **Recent Transactions** — the latest sales, purchases and expenses.

What you can do

- Change the date range to study a different period.
- Press **Download Report** on the watchlist to open a ready-made **Critical Stock Report**. You can choose what to include, then **Export to Excel/CSV** or **Print / Save as PDF**. It also has a note for physical stock verification (counting what is really on the shelf).

6.2 Inventory

Menu: Operations → Inventory · [/pharma/inventory](#)

Purpose: The master list of all your medicines (items) and how much of each you have.

What you see

- **Four cards:** Total Items, In Stock, Low Stock, Out of Stock.
- **Search box** — find by medicine name, brand, category or HSN code.
- **Filters** — by category, and by stock level (All / In Stock / Low Stock / Out of Stock).
- **Table columns:** Item & Brand • Category • HSN Code • Unit • Total Stock • Number of Batches • Low-stock Threshold • Status • Actions.

- Click an item to **open its batches**: batch no., current stock, expiry date, manufacturing date, purchase rate, M.R.P., sale price, supplier and status. You can also click a batch to read its notes.

What you can do

- **Add an item** — fill in the name (e.g. "Cefixime 200 MG"), a short name, HSN code, category, unit (Pcs, Strip, Box...), the low-stock limit, and a short description.
- **Edit** or **delete** an item.
- **Manage categories** — add or delete your own categories (e.g. Antibiotics, Syrups).

Note

You do not type stock numbers here. Stock goes up when you record a **Purchase** and down when you record a **Sale**. This keeps your numbers honest.

6.3 Batches

Menu: Operations → Batches · </pharma/batches>

Purpose: Keep an eye on expiry dates and deal with expired stock (return it or write it off).

What you see

- **Cards:** Total Batches, Active Batches, Expired Batches.
- **Search** by batch, product or supplier.
- **Tabs:** All • Expired • Near Expiry • Safe. Another filter shows only batches that need action, have a pending return, a completed return, or were written off.
- **Table columns:** Batch & Product • Supplier • Expiry Date • **Countdown** (days left) • Available Qty • Purchase Price • **Value at Risk** (money locked in that stock) • Status • Actions.

What you can do

- **Edit a batch** — change its note, sale price, dates and similar details.
- **Return to supplier** — enter the quantity and the reason (e.g. "expired", "damaged"). The stock is taken off your shelf and the return is marked **Pending**.
- **Complete the return** when the supplier settles it, in one of two ways:
 - **Credit Note / Refund** — you get money or a deduction (you enter the amount).
 - **Replacement Stock** — the supplier gives new stock, which is added as a new batch.

Then the return becomes **Completed**.

- **Write off an expired batch** — the remaining quantity is removed from stock, and its cost is saved as a loss under the expense category "Inventory Write-off". You can add a reason (e.g. "Expired on shelf").

What happens to a batch over its life

Stock that sells out completely becomes "Depleted".

6.4 Purchase

Menu: Operations → Purchase · </pharma/purchase>

Purpose: Record the medicines you buy from suppliers. This is how new stock enters the system.

What you see

- **Cards:** Total Purchases, Total Spend, Cash Purchases, Credit Purchases.
- **Search and filters:** search by invoice, supplier, medicine or batch; filter by payment type (Cash / Credit / Bank Transfer / Cheque / Mobile Payment), payment status (Paid / Partial / Unpaid), party, and a date range.
- **Table columns:** Date • Invoice No. • Payment • Status • Purchase Type • Party • Items & Batches • Amount • Actions.

The "New Purchase" form has 4 parts

- 1 **Purchase Voucher Details** — supplier's invoice number, date, payment type, and VAT type: *VAT/Exempt* (no VAT), *VAT/Item-wise* (VAT only on selected items), or *VAT/Tax Included* (prices already include VAT).
- 2 **Party** — search for the supplier, or press **Add** to create a new supplier right there without leaving the page.
- 3 **Items & Batch Details** — for each medicine: item, quantity, unit, purchase rate, then **batch number and expiry date (required)**, manufacturing date, M.R.P., sale price and an optional note.
- 4 **Discounts & Charges** — discount, freight & forwarding charges, rounding off, VAT refund. Each can be a flat amount (Rs.) or a percentage. You also get a purchase note box. The totals are shown, and the final figures are confirmed when you save.

What happens when you save

- A **new batch** is created for each item and the **stock goes up**.
- The purchase amount is also recorded as an **“Inventory” expense**, so your profit figures stay correct.

Other things you can do

- **Change payment status** — mark Paid / Partial / Unpaid. For a part payment, a small window asks for the amount, method (Cash, Bank, Mobile Payment, Cheque), a cheque/transaction number and a note. It shows the **Total Bill** and the **Balance Due**.
- **Print / Download** the purchase voucher.
- **Edit** a purchase.
- **Delete** a purchase (stock from it is taken back out). **This is blocked if some of that stock has already been sold**, to keep your records correct.

6.5 Sales

Menu: Operations → Sales · </pharma/sales>

Purpose: Record every sale, take payment, and print the invoice.

What you see

- **Cards:** Total Sales, Total Revenue, Cash Sales, Credit Sales.
- **Search and filters:** search by invoice, party or note; filter by payment type, payment status and party (including “Walk-in (Cash)”).
- **Table columns:** Date • Invoice No. • Payment • Status • Party • Items & Dispensed Batches • Total Qty • Amount • Actions.

The “New Sale” form has 4 parts

- 1 **Voucher & Party** — date, payment type (Cash / Credit / Bank Transfer / Cheque / Mobile Payment), payment status, and the customer. Choose **Walk-in / Cash Customer** if you don't need to register them, pick an existing party, or **add a new one** on the spot. The invoice number is given automatically, in order, with no gaps.
- 2 **Items & Batch Allocation** — search the medicine, choose the batch (the one expiring first is highlighted as “Earliest Expiry”), type the quantity and sale rate. The system warns you if you try to sell more than the batch holds.
- 3 **Discounts & Charges** — discount, freight, rounding off, VAT refund (flat or %).
- 4 **Notes / Prescription Reference** — type the doctor's name or any dispensing remarks.

A running summary shows Subtotal, Discount, Freight, VAT refund, estimated VAT (13% by default; each item can be marked VAT-applicable or not) and the estimated Grand Total. **The final totals are calculated by the system when you save.**

What happens when you save

- Stock is **reduced** from the batches you selected.
- Expired batches and out-of-stock quantities are **rejected** with a clear message.

Other things you can do

- **Print / Save as PDF a Tax Invoice** — it shows your business details, customer, item list with batch and expiry, discount, taxable/non-taxable amounts, **grand amount in words**, bank details and signature lines (Delivered By / Received By / Checked By).
- **Change payment status** (Paid / Partial / Unpaid), with the same part-payment window as in Purchase.
- **Edit** a sale.
- **Delete** a sale — the system asks you to confirm: "This will reverse the stock deducted by this sale."

How a payment moves

Every part-payment is saved with its date, method and reference, so you have a clear history.

6.6 Parties

Menu: Parties · </pharma/parties>

Purpose: Your address book of suppliers and customers.

What you see

- **Tabs:** All Parties • Suppliers • Customers, with counts of **Active** and **Inactive** parties.
- **Search** and a status filter (All / Active / Inactive).
- **Table columns:** Party • Type • Contact Person • Contact • PAN No. • Payment Terms • Status • Actions.

What you can do

- **Add a party** — name, type (Supplier / Customer / Both), contact person, phone, email, PAN number, address, and payment terms (e.g. "Net 30").
- **Edit** or **remove** a party.
- **Click the status** to switch a party between Active and Inactive. Inactive parties no longer appear when you pick a party for a new purchase or sale.
- **Open the ledger** of the party (account statement) with one click.

6.7 Party Ledger

Menu: Finance → Party Ledger · </pharma/parties/ledger> and </pharma/parties/<party>/ledger>

Purpose: The full account statement of one supplier or customer — like a bank passbook for that party.

Step 1 — choose a party

- The first page lists your parties. Click one to open its ledger.

Step 2 — read the statement

- **Header:** your business details, the party's details and the **fiscal year**.
- **Date shortcuts:** Today • This Month • This FY • Last 30 Days • Last 90 Days • All Time — or pick your own From/To dates.
- **Opening balance** at the start of the chosen period.
- **Table columns:** Nepali Date • English Date • Type • Voucher No. • Particulars • Debit (Rs.) • Credit (Rs.) • running Balance (Dr/Cr).
- **Closing balance** and totals at the bottom.

Type code	Meaning
Sale	You sold to this party
Purc	You purchased from this party
SIRt	Sales return (customer returned goods)
PurRt	Purchase return (you returned goods to the supplier)
Rcpt	Receipt — money you received
Pymt	Payment — money you paid
Jrnl	Journal adjustment

What you can do

- **Tick the rows** you want (or select all), then print only those lines — handy when you need to show a supplier or customer a statement.

6.8 Expense

Menu: Finance → Expense · </pharma/expense>

Purpose: Record all the money your shop spends that isn't buying stock — rent, electricity, salaries, repairs, and so on.

What you see

- A list of expenses with: Description • Category • Date • Amount • Actions.
- Search, a category filter and a date filter.

What you can do

- **Add an expense** — description (e.g. "Electricity bill"), category, date, amount and an optional note.
- **Edit** or **remove** an expense.
- **Manage Categories** — create your own categories (Rent, Salary, Transport...) or delete ones you don't need.

Automatic entries

Two kinds of expenses are added **for you**: purchases (under "Inventory") and expired-stock write-offs (under "Inventory Write-off"). You don't need to type these again.

6.9 Analytics

Menu: Finance → Analytics · </pharma/analytics>

Purpose: See how your business is performing over any period.

What you see

- **Date Range** picker (by month or year).
- **Three numbers: Revenue, Total Expense, Net Profit.**
- **Revenue vs Expense** — a chart comparing the two over time.
- **Expense Split** — a chart showing which kinds of expenses take the biggest share.
- A **breakdown** chart of revenue.

If there is no information for the chosen period, the page simply shows "No data for this range".

6.10 Settings — General

Menu: Settings → General · </pharma/settings>

Purpose: Set up your business details and manage your own account.

Three sections

- **Business (Organization) details** — upload your **logo**; set business name, PAN/VAT number, phone, email and address. These appear in the menu and on printed invoices, reports and ledgers.
- **My Profile** — change your own name and email.
- **Change Password** — enter the current password, then the new one (at least 8 characters) twice.

Do this first

Fill in your business details before you print your first invoice, so that your name, PAN/VAT and address are correct on every printout.

6.11 Settings — Add Account

Menu: Settings → Add Account · </pharma/settings/add-account>

Purpose: Give your staff their own logins.

- See the **list of existing accounts** (name, email, date added) and search them.
- **Add User** — enter name, email and password (typed twice). The new user is sent a **welcome email**.
- **Delete** an account when someone leaves (you are asked to confirm).

Good to know

All accounts work inside the same business and see the same data. Only give logins to people you trust, and delete accounts of people who have left.

7. Everyday workflows, step by step

A. Setting up for the first time

Opening stock is entered as a Purchase so that every unit has a batch and an expiry date.

B. Buying new stock

- 1 Go to **Purchase** and press the button to add a new purchase.
- 2 Enter the supplier's invoice number, date, payment type and VAT type.
- 3 Pick the supplier (or add a new one).
- 4 Add each medicine with quantity, rate, **batch number** and **expiry date** (required).
- 5 Add any discount or freight, check the totals, and **Save**.
- 6 The stock is now live in **Inventory** and **Batches**. If you haven't paid yet, leave the status as Unpaid and update it later.

C. Selling medicine

- 1 Go to **Sales** and press the button to add a new sale.
- 2 Choose Walk-in, or pick / add the customer. Choose payment type and status.
- 3 Search each medicine, pick the batch (earliest expiry first) and enter the quantity.
- 4 Add a discount if any, write the prescription note if needed, and **Save**.
- 5 Press the print icon on the sale to produce the **Tax Invoice** (print or save as PDF).
- 6 If the customer pays later, open the sale and change its status to Partial or Paid.

D. Handling expiring and expired medicine

- 1 Check the **Dashboard watchlist** regularly — or open **Batches** and use the *Near Expiry* tab.
- 2 Sell near-expiry batches first.
- 3 For batches that have expired, open the batch and choose either:
 - 4 **Return to supplier**, then later mark it complete as *Credit Note / Refund* or *Replacement Stock*; or
 - 5 **Write off** the stock (recorded as a loss).

E. Paying a supplier or collecting money from a customer

- 1 Open **Purchase** (for suppliers) or **Sales** (for customers) and find the bill.

- 2 Change the status to **Partial** or **Paid**.
- 3 For a part-payment, enter the amount, payment method and any cheque / transaction number.
- 4 Open **Party Ledger** to see the updated balance for that party.

F. Reviewing your business at month end

- 1 Record any remaining **Expenses**.
- 2 Open **Dashboard** for the quick view, or **Analytics** for the detailed charts.
- 3 Download the **Critical Stock Report** and count the shelf stock against it.
- 4 Print **Party Ledgers** to settle accounts with suppliers and customers.

8. What the colours and statuses mean

Status	Meaning	What to do
Active / Safe	Batch is within date and can be sold.	Nothing — sell normally.
Near Expiry	Batch will expire soon. The Dashboard flags batches within 15 days; the Batches page, by default, within 90 days.	Sell these first.
Expired	Past its expiry date. It cannot be sold.	Return to supplier or write off.
Depleted	All units of this batch are gone.	Nothing.
In Stock	Item is above its low-stock limit.	Nothing.
Low Stock	Item is at or below the limit you set.	Plan a new purchase.
Out of Stock	No units left.	Buy more if needed.
Unpaid	Nothing paid yet on the bill.	Record payment when paid.
Partial	Part of the bill is paid.	Record the remaining payment.
Paid	Fully settled.	Nothing.
Pending (return)	You sent stock back; supplier hasn't settled.	Complete it once settled.
Completed (return)	Supplier gave a credit note/refund or replacement.	Nothing.

9. Printing & reports

Document	Where to find it	Output
Tax Invoice	Sales → print icon on a sale	Print / Save as PDF
Purchase Voucher	Purchase → print icon on a purchase	Print / Download
Critical Stock Report	Dashboard → Download Report	Excel / CSV, Print / PDF
Party Ledger statement	Party Ledger → open a party → print	Print (choose rows)

Save as PDF

In the print window, choose "Save as PDF" as the printer. You can then email or WhatsApp the document.

10. Safety & good habits

- **Your data belongs only to your business.** Every login is tied to one business, and other businesses cannot see your records.
- **Sign-in is protected.** Wrong passwords are limited to 5 attempts, and passwords are stored in scrambled form, never in plain text.
- **Use a strong password** (at least 8 characters) and don't share it. Give each staff member their own account.
- **Always log out** on shared computers.
- **Enter purchases and sales on the same day.** The numbers in Dashboard, Analytics and Ledger are only as good as the entries behind them.
- **Enter correct expiry dates.** The warnings and the "cannot sell expired" protection rely on them.
- **Set a low-stock limit** for important medicines so you are warned before you run out.
- **Count your shelf now and then** and compare with the Critical Stock Report.
- **Deleting or editing a bill** changes your stock. Do it only when the entry was a mistake.

11. Questions & answers

Do I type the stock quantity myself?

No. Stock changes only through Purchases (up), Sales (down), Returns and Write-offs (down). That way there is always a record of *why* the number changed.

I cannot find the batch I want when selling.

Only batches that still have stock and have **not expired** are shown. Check the Batches page to see the batch's status and quantity.

The system says I cannot delete a purchase.

Some stock from that purchase has already been sold or moved. To correct it, edit the purchase instead, or use a return/write-off for the remaining stock.

A customer is not registered. Can I still sell?

Yes. Choose **Walk-in / Cash Customer** in the sale form.

What is the difference between "Return to supplier" and "Write-off"?

Return means the supplier takes the goods back and gives you money or new stock. **Write-off** means the stock is thrown away, and its cost is counted as your loss.

Where do I change VAT?

VAT is set in each purchase (by VAT type) and in each sale (13% by default, and each item can be marked VAT-applicable or not). Your business PAN/VAT number is in Settings → General.

I forgot my password.

Use **Forgot password?** on the Login page. A 6-digit code is sent to your email.

Can I use it on my phone?

Yes. The pages adapt to the phone screen, and the system can be installed to the home screen like an app. An internet connection is needed to work with your data.

Who do I contact for help?

Please contact your system provider with a short description (and a screenshot, if possible) of what you were doing and what you saw on the screen.
